## Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

That which is claimed is:

(Currently Amended) A method, comprising:
receiving an input signal;

extracting a haptic code from the input signal, the haptic code being associated with a haptic logo, with said haptic logo providing information identifying an originator of said input signal; and

providing a control signal to an actuator, the control signal being based at least in part on the haptic code and configured to cause the actuator to output a haptic effect associated with the haptic logo.

- 2. (Original) The method of claim 1 wherein the haptic logo is associated with a status event.
- 3. (Original) The method of claim 2 wherein the status event includes one of an advertisement event, a business-transaction event, a one-to-one marketing event, a stock-trading event, a weather-forecast event, an entertainment event, a sports event, and an emergency event.
- 4. (Original) The method of claim 1 wherein the haptic effect is output to a handheld communication device.
- 5. (Original) A method, comprising:

receiving an input signal associated with a chat message;

causing an avatar associated with the chat message to be displayed on a handheld communication device; and

outputting a control signal to an actuator coupled to the handheld communication device, the control signal configured to cause the actuator to output a haptic effect associated with the chat message.

- 6. (Original) The method of claim 5 further comprising extracting a haptic code from the input signal, the control signal being based at least in part on the haptic code.
- 7. (Original) The method of claim 5 further comprising correlating the haptic effect is with an expression of the avatar.
- 8. (Currently Amended) A computer-readable storage medium on which is encoded program code to be executed by a processor, said program code[[,]] comprising:

program code for receiving an input signal;

program code for extracting a haptic code from the input signal, the haptic code being associated with a haptic logo, with said haptic logo providing information identifying an originator of said input signal; and

program code for providing a control signal to an actuator, the control signal being based at least in part on the haptic code and configured to cause the actuator to output a haptic effect associated with the haptic logo.

- 9. (Original) The computer-readable medium of claim 8 wherein the haptic logo is associated with a status event.
- 10. (Original) The computer-readable medium of claim 9 wherein the status event includes one of an advertisement event, a business-transaction event, a one-to-one marketing event, a stock-trading event, a weather-forecast event, an entertainment event, a sports event, and an emergency event.
- 11. (Original) The computer-readable medium of claim 8 wherein the haptic effect is output to a handheld communication device.
- 12. (Original) A computer-readable medium on which is encoded program code, comprising:

program code for receiving an input signal associated with a chat message;

program code for causing an avatar associated with the chat message to be displayed on a handheld communication device; and

program code for outputting a control signal to an actuator coupled to the handheld communication device, the control signal configured to cause the actuator to output a haptic effect associated with the chat message.

- 13. (Original) The computer-readable medium of claim 12 further comprising program code for extracting a haptic code from the input signal, the control signal being based at least in part on the haptic code.
- 14. (Original) The computer-readable medium of claim 12 further comprising program code for correlating the haptic effect is with an expression of the avatar.
- 15. CANCELLED
- 16. CANCELLED
- 17. (Currently Amended) An apparatus, comprising:

a processor;

an actuator in communication with the processor; and

a memory in communication with the processor, the memory storing program code executable by the processor, including:

program code for receiving an input signal;

program code for extracting a haptic code from the input signal, the haptic code being associated with a haptic logo, with said haptic logo providing information identifying an originator of said input signal; and

program code for providing a control signal to the actuator, the control signal being based at least in part on the haptic code and configured to cause the actuator to output a haptic effect associated with the haptic logo.

- 18. (Original) The apparatus of claim 17 wherein the actuator is coupled to a handheld communication device.
- 19. (Original) The apparatus of claim 18 wherein the handheld communication device includes one of a cellular phone, a satellite phone, a cordless phone, a personal digital assistant, a pager, a two-way radio, a portable computer, a game console controller, a personal gaming device, and an MP3 player.
- 20. (Original) The apparatus of claim 17 wherein the haptic logo is associated with a status event.
- 21. (Original) The apparatus of claim 20 wherein the status event includes one of an advertisement event, a business-transaction event, a one-to-one marketing event, a stock-trading event, a weather-forecast event, an entertainment event, a sports event, and an emergency event.
- 22. (Original) The apparatus of claim 17 wherein the memory further stores a haptic lookup table associating a plurality of haptic codes each with a control signal.
- 23. (Original) The apparatus of claim 22 wherein the memory further stores program code to download the haptic lookup table from a remote source.
- 24. (Original) The apparatus, comprising:
  - a processor;
  - a display module in communication with the processor;
  - an actuator in communication with the processor; and
- a memory in communication with the processor, the memory storing program code executable by the processor, including:

program code for receiving an input signal associated with a chat message;

program code for causing an avatar associated with the chat message to be displayed on the display module; and

program code for outputting a control signal to the actuator, the control signal configured to cause the actuator to output a haptic effect associated with the chat message.

- 25. (Original) The apparatus of claim 24 wherein the actuator is coupled to a handheld communication device.
- 26. (Original) The apparatus of claim 25 wherein the handheld communication device includes one of a cellular phone, a satellite phone, a cordless phone, a personal digital assistant, a pager, a two-way radio, a portable computer, a game console controller, a personal gaming device, and an MP3 player.
- 27. (Original) The apparatus of claim 25 wherein the display module is included in the handheld communication device.
- 28. (Original) The apparatus of claim 27 wherein the display module includes a liquid crystal device.
